PRECISION CNC MACHINING

VISUALIZE | What we do

At **Access Precision Machining (APM)** we believe that by investing in skilled journeymen, a state of the art facility and the latest in machining technology, we can visualize and create any product you require with passion, precision and efficiency.

We are a full service manufacturing partner who provides high quality machining, turn key product service and simplified part management solutions to suit your needs.

Industries Served | Working with you

- | | | |
|---------------------------|-------------------|-----------------------|
| Aerospace | Agricultural | Alternative Energy |
| Custom Tooling and Design | Forestry | Industrial/Commercial |
| Marine | Medical | Mining |
| Oil and Gas | Prototype and R&D | Transportation |

CREATE | Who we are

We are a certified ISO 9001:2008 firm, operating in our new 33,000 sq foot leading edge facility located in Salmon Arm, British Columbia.

Our leadership team is led by Owner, Mike Melin, who has 35 years of experience in the industry. This provides us with the extensive knowledge required to be one step ahead and to be able to change with evolving market needs. In addition to Mike's passion for the industry, he is also committed to his staff's well-being and professional development. This includes maintaining a clean and safe work environment, generous work/life balance, opportunities for career growth and a robust safety program.

We have a high standard for Quality Control at Access Precision. This is backed by an expansive collection of measuring tools including: a Mitutoyo CMM, licensed Gagemaker thread program, API thread gauges, optical comparator, hardness and surface testers and an extensive array of related instruments. We also understand the sensitivity and importance of our client's intellectual property and we have comprehensive measures in place to protect all interests.

INNOVATE | The APM difference

By investing in the latest tooling, machines and equipment while engaging and challenging our staff with the goal of continuous improvement we are able to provide high quality products and compete with traditional large machine shops. Our location in the beautiful Shuswap gives us a competitive advantage when servicing our clients. We are centrally located on the TransCanada corridor, enabling time sensitive, FOB shipping to your door!

To ensure a successful manufacturing process, our machinists write the vast majority of the programs we use. This ensures that nothing gets lost in translation between a programmer and the machinist running the parts.

We believe our culture is what defines us. Our Team has created a culture that is built on trust, community and precision – this is reflected in both our staff and client relationships, as well as the high quality products we manufacture.

SUSTAINABILITY | Engagement

Business Operations

- Support local economic development
- Engaging local businesses
- Endorse local recycling program
- Conflict minerals policy

Environmental

- Recycle metal waste chips
- Coolant capture, treatment and recycle program
- Facility hosts numerous energy-efficient elements

Community Investment

- Invest in social programs and development
- Engage with local education and trade development programs
